The CULTURE of WATER LILIES

Very Important

Three conditions that are necessary for the Water Garden.

First—SUNSHINE. The water garden must have at least half of the day's hot sun.

Second—UNDISTURBED WATER. Water lilies will not grow in running water. Just fill up the evaporation. Do not change the water in the Pool during the hot weather.

Third—PLENTY OF GOOD SOIL. Water lilies are heavy feeders and should have at least four cubic feet of well fertilized soil to each plant. This amount will carry them through the third season.

Location—The pool or water garden should be exposed to the sun at least half of the day. The depth should be from 18 inches to three feet; the best depth for all purposes is 30 inches.

Preparation—Any good garden soil mixed with about one-fifth of well rotted cow manure; spread over the floor of the small pools to a depth of 10 to 12 inches; cover the top with one inch of sand and level off well.

Planting—The lily tubers should be planted so that the crown or growing point is just out of the soil. If the growing point seems to come out to one side, plant the tuber so that the tips of the new leaves are looking up. Most shallow water plants like water from two to six inches in depth. Bog plants should be planted in wet ground.

Planting Time—We prefer to ship the different varieties at the proper time for planting in each locality. Hardy lilies may be shipped as early as April or May. Tender varieties should not be set out before the middle of June.

In large pools where it is desired to place the plants in boxes, the boxes should be two by two feet square and one foot deep, made of Oregon pine, allowing one box for each lily. However, the lilies will grow more vigorously and bloom more freely if placed in soil spread over the bottom of the pool. **Caution:—**Do not use Redwood lumber.

Where group planting is desired in large pools, boxes can be made any desired size, allowing about two feet each way for the number of plants to the box.

In wild planting, to fill the pool for the first time with water, it is a good plan to wet the bed first with a spray from the hose after the lilies are set and then lay the hose on a burlap sack and fill

very slowly; this will not disturb the planting and will give you a nice clear pool.

All sub-aquatics for best results, should be planted in shallow water not over an inch or so in depth.

To destroy the wigglers that hatch into mosquitoes and larvae of other insects, a few gold fish will keep the water pure.

Winter care for hardy water lilies and of pools consists of draining artificial pools and covering the plants with sufficient leaves and litter to prevent actual freezing. Pools deep enough not to freeze solidly should be left alone. Tubs may be treated the same way to remove to root cellar for the winter.

Pool Construction—Water lily pools may be built in several different ways. The easiest one to make is the shallow sided basin. All that is required is to excavate the center to a depth of about three feet and then slope the sides gradually to the top. This basin may then be lined without building the usual forms. The concrete used should be one part cement, three parts sand and five of gravel, mixed together dry enough to stand in place when tamped. After foundation is set it should be broomed over with a mixture of one part cement and one part sand, with enough water to make it work easily. This will fill up all holes and cracks, making the pool water tight.

A straight sided pool may be made any shape desired by simply digging a narrow trench to the required depth and filling it with concrete. After it sets the inside is dug out and the bottom of concrete is poured in. Care should be taken that the inside of the trench be smooth and that it be dug to a level depth. The top of the wall can be covered with soil, and the plants allowed to grow to the water's edge or it may be brought up and finished with rocks in any manner that may please the imagination.

Inlet and drain pipes are convenient, but a hose may be used for filling and siphoning when necessary. A new pool should be filled and emptied several times to remove any alkali that might injure plants or fish.

Tub Culture—It is entirely practical and satisfactory to grow water lilies and aquatics in tubs, half barrels or any containers two feet or more across, that hold water. Many city dwellers find this method very convenient.

We are always glad to give any advice regarding the construction and cultivation of water gardens.

MAKING UP YOUR ORDER

Place orders early—preferably NOW—for spring deliveries. This will prevent delay of shipment after plants are ready.

We ship by express—purchaser to pay all transportation charges.

When purchaser wishes stock to be shipped by Parcel Post please inclose postage. Otherwise we will ship by express.

Water lily roots weigh about one pound each when packed ready for shipment.

Our prices are quoted net and cash is expected with order.

Hardy Water Lilies

WHITE WATER LILIES

Marliacea Albida—Large flowers of sparkling whiteness, stamens light yellow; produces freely and continuously throughout the season. This is easily the best of the white water lilies. **\$1.00 each.**

Tuberosa Richardsonii—Flowers are pure white, double and good size, generally six to eight inches across; fragrant. This water lily is a perfect cup shape. **\$1.00 each.**

Gladstoniana—Extra large white with a very strong growth. A very fine lily, especially good for large pools and lakes. **\$1.50 each.**

PINK WATER LILIES

Marliacea Rosea—Flowers large deep rose color; young leaves are blush red changing to a deep green. A vigorous grower and bloomer. One of the very best pink hardy water lilies. **\$1.50 each.**

Marliacea Carnea—(Flesh Pink) Beautiful light pink flowers of good form. Blossoms are large, the plant strong and free blooming. **\$1.00 each.**

Masaniello—A bright pink shaded to red. The plant is a strong grower giving lots of bloom. One of the best. **\$1.25 each.**

Rose Arey—This lily is of exceptional beauty, color and fragrance. The flowers may reach eight inches in diameter and are of a deep cerise pink. **\$1.50 each.**

Morning Glory—A large pink lily of the Marliac type. The color is a light shell pink, almost white at the tips of the petals shading deeper toward the center of the flower. It is a strong grower and good bloomer. **\$1.50 each.**

William Doogue—A magnificent lily. Flower cup-shaped, 5 to 6 inches across, of beautiful shell pink; deliciously fragrant. **\$1.00 each.**

Eugenia de Land—Flowers of exquisite shade of deep rose pink with petals long lanceolate, yellow stamens. Very fragrant, borne on the surface of the water. Very desirable. **\$1.00 each.**

W. B. Shaw—The flowers open wide and are of a rich rose pink color. Very fragrant. One of the first to open in the morning and last to close at night. **\$1.00 each.**

Pink Opal—A deep rich pink with a pleasing fragrance. A short petalled flower, standing well above the water. **\$1.00 each.**

YELLOW WATER LILIES

Marliacea Chromatella—Flowers of charming canary yellow, from four to six inches in diameter, with bright yellow stamens. The leaves are beautifully mottled with brown. The plants flower freely and are of easy growth. The best yellow water lily in cultivation for all purposes. **\$1.25 each.**

Pygmaea Helvola—Beautiful small yellow flowers which float on the surface of the water. They are about two inches in diameter. Leaves are small, beautifully mottled with brown spots. The plants flower freely. Suitable for tub culture **75c each.**

RED WATER LILIES

Gloriosa—This is a magnificent variety with flowers from four to six inches across, of beautiful form which float on the water. They are of a deep carmine rose color, becoming a deep red with age. The plant is very free in flower, blooming continuously throughout the season. This lily is the best of this class for all purposes. **\$2.25 each.**

James Brydon—A superb variety, being a free bloomer, with rose crimson flowers four to five inches in diameter. **\$1.50 each.**

Robinsoni—Large flowers of dark orange red. An extra good bloomer and should be in every collection. **\$1.50 each.**

Escarboucle—Flowers are bright vermillion, striking in their brilliancy and extremely attractive. A rich, spicy odor adds to the charm of the flower. The plants make strong growth. **\$2.50 each.**

Conqueror—The largest bloom of the hardy varieties. The flowers are bright red, with petals shaded into white on the concave part, and streaked with deep red on the convex surface; stamens are yellow orange. Showiest water lily in cultivation. **\$2.25 ea.**

William Falconer—The darkest of the red lilies. A deep velvety red that is hard to find in any type of flower. **\$2.50 each.**

Lucidia—A free grower and a good bloomer. Flowers are large and star shaped; salmon pink shaded to a darker center with yellow stamens, making a wonderful coloring in a water lily. Leaves blotched with brown. **\$2.00 each.**

Attraction—An immense flower, bright red in color, freely produced. As the flower ages the color deepens to rich crimson **\$2.25 each.**

SUNSET COLORS

Comancha—The best of all sunset colors and the hardiest of all water lilies. A steady free bloomer, one of the first to open in the spring and among the last to cease in the autumn. A vigorous plant,

thriving and blooming under the most adverse conditions and perfectly at home in the tub garden or large pool. **\$1.50 each.**

Sioux—This is a star shaped variety. The flower is large and upon first opening is a dull rich bronze. The yellow changes to a reddish cast on succeeding days, making it most unique in color of any of the lilies. The plant blooms continuously throughout the season. **\$1.00 each.**

Paul Hariot—Large flowers of clear yellow, with delicate shadings of red at base of petals. Leaves spotted with brownish red. Small growth, beautiful blooms. **\$1.00 each.**

Aurora—This lily derives its name from the changing colors of the blossoms. It opens yellow warmed with amber, and deepens daily to dark red, giving a wide range of color in one plant. **\$1.00 each.**

TENDER WATER LILIES

William Stone—Purple blue flowers from 5 to 7 inches across, have purple stamens and deep yellow centers; they stand well out of the water, and open early and remain open all day. **\$1.50 each.**

THE SACRED LOTUS or NELUMBIUM

Egyptian Lotus—This is the true flower of the Egyptians and possesses a strange haunting fragrance. Originated in India and taken to Egypt to become a sacred flower. The blossoms are an attractive pink. An excellent variety that grows very hardy and freely in the latitude of Cleveland. **Tubers \$1.50**
(Tubers only in April or the first part of May.)

SHALLOW WATER PLANTS

Arrowhead, Giant—Distinctive leaves, shaped as name indicates, standing one to three feet out of the water. Flowers freely in a series of white spikes. Hardy. **25c each: 5 for \$1.00.**

Cat Tails—One of the favorite native swamp plants. **15c or 4 for 50c.**

Pickereel Rush—The blue flowers of this plant have many friends, particularly as they are produced freely. The total growth is about 2 feet. **25c each.**

Water Plantain—A border plant with heart-shaped leaves standing about one foot above the water and surrounded by tall branching spikes of small white flowers. Hardy. **25c each.**

Thalia Dealbata or Water Canna—A fine and stately aquatic, with canna like leaves, to be grown in shallow water or wet soil. Effective for the margin of pools. **50c each.**

Floating Heart—This plant has leaves like the water lilies, with bright yellow flowers. Grows well and blooms freely. Does best in shallow water. **25c each, 5 for \$1.00**

Water Hawthorn—Snow white flowers with the fragrance of English Hawthorn. They bloom very early in the spring and late in the fall. **35c each.**

Water Poppy—A very pretty aquatic plant, with floating leaves and large yellow poppy-like flowers. **15c each, 4 for 50c.**

Water Shield—Floating, oval leaves, borne on stems covered with transparent jelly. The flowers of purplish red, about one inch across. The leaves turn red as the season advances making them attractive in small pools. **15c each, 4 for 50c.**

Parrot Feather—An aquatic plant having long trailing stems covered closely with whorls of most delicate foliage. For border or fountain plant. **15c and 25c bunches.**

Anacharis—One of the best aquarium plants, as it is a good oxygenator. In form it is moss-like, the leaves growing on a fragile stem, the entire plant being submerged at all periods. A very attractive plant of dark green growth and very easy to keep in an aquarium. **15c and 25c bunches.**

Ludwiga—One of the prettiest of the submerged plants. Oval leaves tinged pink. **15c and 25c bnchs.**

MARSH OR BOG PLANTS

Collection of Bog Grasses and Reeds, for the pool margin. **6 for \$1.00.**

Forget-Me-Nots—Small blue flowers with golden centers; dark green foliage. Grows from edge of pool into water. **15c each, 4 for 50c.**

Umbrella Palm—A very ornamental plant for side of water. Also grows well in the water and moist ground. **25c and 50c each.**

Lythrum, Roseum Superbum—Very attractive hardy perennial, with long spikes of rose pink bloom, growing four to six feet tall. Does best in wet soil. **25c each.**

Water Iris—The Giant Yellow Flag, growing to a height of five or six feet having large clusters of blooms. Makes a fine center or corner for your pool. **25c each, \$2.00 per dozen.**

Japanese Iris—This is the elite of the Iris family. The flowers begin to open about the middle of June and continue for several weeks. They grow in any good garden soil but delight in an abundant supply of water. For massing or planting along a stream or around a pool, Japanese Iris are ideal. Strong divisions of unnamed varieties, ranging in color from pure white to a rich purple. **25c ea., \$2.00 per doz.**

Primrose Creeper—A fern like leaf of light green. Flowers buttercup yellow. Grows well in shallow water or wet ground. **25c each.**

Western Marsh Fern—The fronds of this fern are delicate and lacy, apple green in color. Grows two to four feet in height. Does well in moist soil. Its fronds are of an annual growth. **35c each.**

Chinese Matrimonial Vine—This vine has dark bluish green leaves, clusters of purple blossoms, which ripen to bright red berries on purple stems. Grows well in any soil. Distinctly ornamental on lattice fences or stone walls. **25c each.**

FLOATING PLANTS

Water Hyacinth—Flowers a delicate lilac in trusses like a hyacinth. The plant is a floater and only requires placing in water where it will take care of itself. For the best results it should be confined to shallow water two to eight inches, where it will root into the mud and be a mass of bloom from July to October. **15c each, 4 for 50c.**

Duck Weed—Appears as a series of green polka dots on the surface. The small roots are much appreciated by goldfish. **25c portion.**
